I am a driven, front-end web developer with over 10 years of experience, pixel-perfect aspirations, and the desire to learn new technologies along the way. I am always striving to achieve the perfect balance between aesthetics and usability; customization and re-usability. I have contributed to enterprise-level management software, custom web form creation software, BI tools, and media-driven audience engagement platforms.

I am looking to join a fun, forward-thinking team that could use my experience in product-building and design-thinking.

Industry Knowledge

- Software Development
- Product Development
- UX/UI Design and Prototyping
- Responsive Web Design

- Email Marketing
- Graphic Design & Iconography
- Agile Methodologies

Tools and Technologies

- HTML5, Bootstrap
- CSS, SASS, LESS
- JavaScript, jQuery, AngularJS, Typescript
- NodeJS, working knowledge of Java/ASP.net
- JIRA, Confluence, Slack

- Grunt, Gulp, Webpack
- NPM, Bower
- GitHub, SVN, TFS
- Adobe CS
- Axure, Sketch, Zeplin

Experience

APRIL 2016 TO OCTOBER 2018

Software Engineer / Omeda Communications, Inc. Chicago, IL

At Omeda, I've worked across teams to find visual, technical, and practical solutions to an array of products ranging from media-driven audience engagement apps to complex, multi-tenant dashboard applications.

As part of Omeda's innovator group, I served as a liaison between design, development, and QA teams, often having a hand in conceptualizing designs and bringing them to life. I also served as a resource in the decision-making process when selecting technologies (such as AngularJS/Typescript,

NodeJS, ASP.net MVC, CSS pre-processors such as LESS and SASS, and build systems Grunt and Gulp). I also fulfilled client requests in Omeda's Java-based custom web form solution.

JULY 2013 TO APRIL 2016
Front End Web Developer / Hallmark Data Systems, Skokie, IL

As a front-end web developer, I designed and developed innovative, highly usable interfaces across multiple product platforms.

Among my responsibilities, I built both lo-fi and working prototypes with Adobe CS, HTML, CSS, and JavaScript frameworks to communicate and refine product concepts, promoted best practices for web and responsive user experiences with frameworks such as Bootstrap, made important UI/UX decisions, collaborated in an agile environment with fellow team members to understand business requirements, and provided support for issues reported during the development life cycle and production.

JULY 2008 TO JULY 2013
UI Designer/Production Specialist / Hallmark Data Systems, Skokie, IL

I designed and coded responsive web forms as a production specialist using HTML, CSS, and JavaScript best practices, helping to cater to client needs and provide them with easy-to-use, modern web forms that yielded higher customer engagement. Hallmark also tasked me and my team with designing and developing an in-house form builder (Dragon) to make the form building process even easier internally as well as for client-use. Dragon had become the most widely requested products amongst Hallmark Clients to date.

Education

2002 TO 2006
Bachelor of Arts in Digital Media / University of Central Florida, Orlando

- Recipient Florida Medallion and Bright Futures Scholarships
